Acknowledgements

The Department of Public Social Services (DPSS) Director, Susan von Zabern, and Assistant Director, Lisa Shiner, along with the 2016 Point-In-Time Homeless Count (PIT Count) Planning Team would like to thank all of the individuals and agencies who contributed their time, money, staff, and effort toward this important event. Coordinating the Point-In-Time Homeless Count is a massive undertaking. We would not have been able to conduct this count and survey without the participation of many community-based organizations and agencies. This year's count involved 503 volunteers, which included 33 City Leaders from the community, eight DPSS Staff Site Coordinators, and two DPSS PIT Count Call Center Staff.

We extend our sincerest appreciation to the agencies that allowed their staff to volunteer for the PIT Count:

ABC Recovery Center
 All Saints Episcopal Church

We would also like to thank all of the City Leaders and the agencies who permitted City Leaders and Site Coordinators to use their facilities as Deployment Centers. In addition, we would like to thank all of the City Leaders and agencies that helped promote, develop, and coordinate the street-based count in their respective areas. Deployment Centers were used as a place for volunteers to gather, receive instructions, safety reminders, supplies, incentives, maps, and team assignments:

Thank you to all city leaders for working to increase public awareness about the Riverside County PIT Homeless Count. We express our deep gratitude to the individuals and organizations who donated money, personal care items, and services to the PIT Homeless Count, including, but not limited to:

County of Riverside Department of Public Health
Valley Restart
Anna Hause Elementary School (Beaumont)
Early Act Club & Friday Night Live Kids

Martha's Village & Kitchen
Susan Jeffries
San Gorgonio Girl Scout Troop 176

These generous donations contributed to 2,000 incentive bags which included a pair of socks, a bar of soap, a resource card, and either a knit cap or pair of gloves. These incentive bags were given to homeless individuals who completed our survey during the unsheltered street-based and service-based counts on January 26, 2016.

Finally, we would like to thank: Members of the Continuum of Care (CoC) for their insightful comments and feedback regarding the preliminary PIT Count data; The Institute for Urban Initiatives for serving as an ad hoc consultant throughout the PIT Count process; Riverside County Information Technology for their incredible turnaround time generating maps that were distributed to volunteers during the PIT street-based count; and Riverside County DPSS Purchasing Department for quickly processing all PIT Count-related purchase requests.

A special thank you also to Riverside County DPSS, Adult Services Division, Homeless Programs Unit, who worked diligently to plan, coordinate, develop, and implement the 2016 PIT Homeless Count.

Executive Summary

The 2016 Point-In-Time Homeless Count and Survey, conducted on January 26, 2016, identified **1,351 unsheltered** and **814 sheltered** homeless people (**total = 2,165**) in Riverside County, California. **The total Point-In-Time Count decreased by 12% from 2015 to 2016.** Data collected during the count reflects a snapshot of Riverside County's homeless population at one particular point in time.

The total Point-In-Time Homeless Count decreased by 12% from 2015 to 2016.

The 2016 unsheltered count methodology consisted of a street-

The total unsheltered homeless people counted decreased by 15% in 2016 to 1,351.

based count, service-based count, and Riverside University Health System - Behavioral Health homeless outreach count. A total of 503 volunteers were deployed across Riverside County to successfully count and survey the unsheltered homeless population. PIT Count data was deduplicated using an algorithm to generate a unique ID for each individual counted which utilized several fields of information from the survey. This process allowed data analysts to easily identify and eliminate duplicate records using a statistical database program. Compared to the 2015 PIT Count, the number of unsheltered homeless people counted decreased by 15% in 2016 to 1,351.

Among the 1,351 unsheltered individuals counted in 2016, 1,042 were interviewed and 309 were observed.

The sheltered count methodology consisted of data extracted from the Homeless Management Information System (HMIS) to identify sheltered homeless individuals on the night of January 25, 2016. Compared to the 2015 PIT Count, the number of sheltered homeless people decreased by 8% in 2016 to 814. The decrease in the overall unsheltered 2016 Point-in-Time Count reflects a trend countywide that began in 2013. The County of Riverside Department of Public Social Services (DPSS) submits that this continued decrease may be attributed to the following:

The total sheltered homeless people counted decreased by 8% in 2016 to 814.

- HUD Continuum of Care (CoC) Program funding continues to prioritize the creation of new permanent housing beds for homeless individuals and families throughout the county. This includes a 79% increase in the number of new permanent housing beds since 2013¹. A majority of these beds have been "leased up" with unsheltered homeless people, including those who are chronically homeless.

¹ The 2013 Housing Inventory Chart (HIC) reported 862 permanent beds; in 2015, there were 1,547 permanent beds reported in the HIC. This included; HUD Permanent Supportive Housing, Rapid Rehousing, Veterans' Affairs Supportive Services for Veterans and VA Supportive Housing (HUD-VASH).

- A surge in funding by the U.S. Department of Veterans' Affairs (VA) to provide supportive services to veterans and their families. This includes increased funding for the Veterans Affairs Supportive Housing (HUD-VASH) program that provides rental assistance for homeless veterans and the Supportive Services for Veteran Families (SSVF) program that provides a range of supportive services to eligible Veteran families that are designed to promote housing stability.
- Further, in 2015 a targeted countywide effort to coordinate services to permanently house homeless people who are living in encampments began as part of a collaboration between key county and nonprofit agencies working on the frontlines to end homelessness. This enhanced partnership includes the Riverside County Sheriff's Department, DPSS Homeless Programs Unit, Housing Authority of the County of Riverside, The Riverside University Health System – Behavioral Health (formerly Department of Mental Health), the U.S. Department of Veterans' Affairs, Loma Linda Medical Center, Path of Life Ministries and other key nonprofit housing providers. This coordination effort has assisted in closing several homeless encampments and providing permanent housing for a majority of the people who were living in riverbeds, near freeways and other places not meant for human habitation.

On the day of the Point-In-Time Count, additional services were offered to our Veterans encountered during the street-based Count. Veterans who wanted to receive housing services were transported to either the Riverside Access Center or the Indio Workforce Development Office for immediate processing. VA and Housing Authority staff were available at these centers to complete VI-SPDATs (needs assessments), issue VASH vouchers and complete other eligibility services. Beds were reserved at Path of Life Ministries and the Coachella Valley Rescue Mission to offer emergency shelter for any veterans encountered on the day of the PIT Count. There were six veterans who received a Housing Choice Voucher through the HUD-VASH program on the day of the PIT Count.

Riverside County's Department of Public Social Services (DPSS), in partnership with the County of Riverside Continuum of Care continues to explore new and innovative strategies for conducting a successful PIT Count in 2017 and beyond.

Introduction

The Point-In-Time (PIT) Homeless Count is a count and survey of Riverside County’s sheltered and unsheltered homeless population. Riverside County’s Department of Public Social Services (DPSS), in partnership with County of Riverside Continuum of Care, is required to conduct this biennial count during the last 10 days in January. The Continuum of Care (CoC) is a network of private- and public-sector homeless service providers, designed to promote community-wide planning and the strategic use of resources to address homelessness.

The PIT Count is federally-mandated by the U.S. Department of Housing and Urban Development (HUD) to count and survey the homeless population in cities and counties throughout the nation, including Riverside County. Each count is planned, coordinated, and carried out locally. Data collected during the count reflects a *snapshot* of Riverside County’s homeless population at one particular point-in-time and is required in order to: continue receiving federal funding for homeless assistance programs, develop strategies to end homelessness, help homeless individuals and families who are in need, and produce a full report to HUD regarding the homeless individuals in Riverside County. In 2015, Riverside City and County received a total of \$9.3 million by HUD for the Continuum of Care Program for homeless programs and services.

HUD defines a person who is homeless as: (a) living in a place not designed or ordinarily used as a regular sleeping accommodation for humans (i.e., abandoned buildings, cars, parks, under bridges, bus stops, etc.) and (b) living in emergency shelters and transitional housing projects². It is important to note that HUD’s definition does not include households that are below the poverty line or those individuals that are near-homeless. In addition, HUD identifies people to exclude from the count³:

- (a) Persons counted in any location not listed on the CoC’s Housing Inventory Count (HIC);
- (b) Persons residing in permanent housing (PH) programs, including persons housed using HUD Veterans Affairs Supportive Housing (VASH) vouchers;
- (c) Persons temporarily staying with family or friends (i.e., “doubled-up” or “couch surfing”);
- (d) Persons residing in housing they rent or own (i.e., permanent housing), including persons residing in rental housing with assistance from a RRH project on the night of the count; and
- (e) Persons residing in institutions (e.g., jails, juvenile correction facilities, foster care, hospital beds, detox centers).

² 2014 Point-In-Time HUD Methodology Guide, p. 4

³ 2014 Point-In-Time HUD Methodology Guide, p. 30

Methodology

Overview

The 2016 Point-In-Time (PIT) Homeless Count unsheltered methodology consisted of three primary components:

- a) Street-based count on January 26, 2016 between 5:30 a.m. to 9:30 a.m.
- b) Service-based count on January 26, 2016 between 7:00 a.m. to 2:00 p.m.
- c) Riverside University Health System - Behavioral Health Homeless Outreach between January 26, 2016 – February 2, 2016 (seven-day period of time to cover unincorporated areas throughout Riverside County)

The 2016 PIT Count unsheltered methodology was the same as the 2015 PIT Count unsheltered methodology, with the exception of the separate Youth Count conducted in 2015. Even though a separate Youth Count was not conducted in 2016, youth were identified and counted during the street-based, service-based, and sheltered counts. See Table 1 below for a comparison of PIT Count methodologies.

Table 1. Comparison of PIT Count Unsheltered Methodology

PIT Count Unsheltered Methodology	
2015	2016
Street-based count	Street-based count
Service-based count	Service-based count
Riverside University Health System - Behavioral Health homeless Outreach (seven-day period of time to cover the unincorporated areas)	Riverside University Health System - Behavioral Health homeless Outreach (seven-day period of time to cover the unincorporated areas)
Youth Count	

Subsequent sections will further compare the 2015 and 2016 PIT Count unsheltered methodologies. In both 2015 and 2016, specific attention was given to city engagement and survey development as opportunities to increase the accuracy of the PIT Count.

City Engagement

The methods of city engagement used in 2016 paralleled the methods used in 2015. DPSS made efforts to engage city leaders and establish deployment centers in each city and a thorough list of unincorporated communities was incorporated into the street-based count. City leaders who requested further assistance were assigned a DPSS Site Coordinator to support PIT Count activities on the day of the PIT Count. These DPSS Site Coordinators worked in tandem with city leaders. Their role was primarily to assist the city leaders who were in charge at each deployment center during the street-based count. It is important to note that some city leaders elected not to use a DPSS Site Coordinator as they felt confident with their abilities and available resources to conduct the count. See Table 2 below for a comparison of city engagement.

Table 2: Comparison of City Engagement

City Engagement	
2015	2016
Deployment centers attempted in each city (25 out of 29 cities had deployment centers)	Deployment centers attempted in each city (25 out of 29 cities had deployment centers)
Did NOT designate red zones, but rather attempted to engage every city	Did NOT designate red zones, but rather attempted to engage every city
Included 53 census designated places (unincorporated areas)	Included 53 census designated places (unincorporated areas)
81% of the deployment centers had an assigned DPSS Site Coordinator	20% of the deployment centers had an assigned DPSS Site Coordinator

Survey Development

The survey that was selected for implementation was a slightly modified version of the 2015 Count and Survey tool based on the feedback from our volunteers to improve the previous version. The survey was pilot tested to assess whether prospective volunteers knew how to navigate the survey tool comfortably and whether prospective interviewees clearly understood the questions that were asked.

A total of 40 people piloted the survey tools including: DPSS Adult Services Division Administration staff, community members, and sheltered homeless individuals. In addition, general survey feedback was given by the Riverside University Health System - Behavioral Health homeless Outreach staff. The version that received the most positive feedback was selected for interviewing homeless individuals during the street-based count and the service-based count.

The primary goal for the PIT Count was to *interview* each homeless person. However, it was understood interviewing was not feasible under certain circumstances. Thus, an observational survey tool was developed to allow interviewers to record observational data (perceived gender, ethnicity, age, physical description, etc.) for individuals encountered during the street count who were suspected

to be homeless and were unable or unwilling to be engaged. This observational technique is acceptable according to HUD guidelines⁴. The following were reasons for volunteers to use an observational tool:

- there were barriers to enter the site;
- the site was unsafe to enter;
- the person refused to participate;
- the person was sleeping;
- there was a language barrier; or
- the person was unable to respond (i.e., mental issues, intoxication, etc.).

This observational tool was used during the general PIT street-based count.

Data Entry and Deduplication Method

A Microsoft Access application was created in order to consolidate and store the unsheltered homeless count survey data. Separate applications were created for the street-based interview surveys and street-based observational surveys. Five data entry volunteers entered this unsheltered homeless data into the Microsoft Access application during the month of February.

Since the 2016 PIT Count involved both street-based and service-based counts, a deduplication method was implemented to account for any individuals who may have been interviewed multiple times. The deduplication method for the interview surveys consisted of creating a unique identifier using several fields of information from the survey, such as: first initial, last initial, birth month, birth year, city born, state born, gender, race, and veteran status. The deduplication method for the observational surveys used the following fields to create a unique identifier: reason for observational tool, type of location, age observed, perceived gender, and perceived race. The creation of the unique identifier was conducted in a statistical database program (Microsoft Access), using an algorithm with the identified demographic information to generate a unique ID for each individual counted. This process allowed data analysts to easily identify and eliminate duplicate records.

Table 3 below shows that the total number of street-based (interview and observational tools) and service-based interview surveys returned to DPSS was 1,207 (940 interview surveys, 267 observational surveys). During the data entry process, several survey errors were discovered.

Surveys were rejected prior to data entry for the following reasons: (a) the survey was completely blank except for interviewer name and location; (b) the homeless individual indicated that they stayed in a place the night before that was not considered *unsheltered* according to HUD (house, apartment, emergency shelter, motel, etc.); or (c) the homeless individual indicated they had already been surveyed. There were 21 surveys that were rejected prior to being entered into the database. These criteria resulted in a new subtotal of 1,186 surveys. The PIT Count's analytic rationale was to include all records until there was clarity and certainty that they should be excluded. Once all data was entered and the deduplication method implemented, three surveys were rejected as duplicates,

⁴ 2014 Point-In-Time HUD Methodology Guide, p. 52

resulting in a final sample size of 1,183 surveys. See Table 3 below for the numeric breakdown and filtering process.

Table 3. Breakdown of PIT Count Surveys – Data Cleaning and Deduplication

Total Surveys Returned	Rejected Surveys (Not Entered)	New Sub Total	Rejected Surveys (Duplicates)	Final Sample Size (total number of surveys)*
1,207 (940 interview, 267 observational)	21 (17 interview, 4 observational)	1,186 (923 interview, 263 observational)	3 (3 interview, 0 observational)	1,183 (920 interview, 263 observational)

Note: Some surveys included more than one person on them, thus the reason for the difference in the final sample size vs the total unsheltered count (1,183 vs. 1,351)

Since the observational surveys contained less information and therefore fewer fields to use in the deduplication process, it was challenging to rationalize the drop of any *potential* duplicates in this data. For example, if two different volunteers were instructed to record their observations regarding the same scenario, they would likely describe the scenario in two completely different ways. Thus, there would be no certainty that the individuals observed in the scenario were the same individual or different individuals. Therefore, it was decided to include all observational surveys. Throughout the rest of the report, the results will be discussed in terms of interview survey data versus observational survey data. It is important to make this distinction as the interview survey data is based on the respondent's own self-identification, while the observational survey data is based on the volunteer's perceptions.

Extrapolation techniques are not incorporated into this report. The 2016 PIT Count reflects only individuals who were counted (through direct observation or interviewed), rather than estimated based on tents or belongings.

It was not feasible to deduplicate the interview and observational data together because, again, the interview data was based on self-identification while the observational data was based on volunteer perception. Therefore, none of the fields from these two different surveys were identical, making it nearly impossible to deduplicate across survey types.

Volunteer Recruitment

There were a total of 503 volunteers, including 33 Key Leaders from the community, eight Department of Public Social Services (DPSS) Staff Site Coordinators, and two DPSS PIT Call Center Staff who contributed to the unsheltered PIT Count and survey.

Volunteers were recruited through the following methods: email blasts; outreach to faith-based organizations and local colleges and universities; press releases published in several print and online newspapers throughout Riverside County; volunteer trainings which ran from December 7, 2015 to January 25, 2016; and printed flyers distributed at various agencies and collaborative meetings. A web-based survey (SurveyMonkey) was used to keep track of volunteer registrations.

PIT Count Volunteers were able to provide assistance in the following ways:

- served as enumerators in the street-based count on January 26, 2016, between 5:30 a.m. and 9:30 a.m.;
- helped DPSS identify locations in Riverside County where homeless individuals and families were known to live and congregate; and
- donated items to be used in the incentive bags given to homeless individuals who were surveyed.

All volunteers were required to complete a 90-minute volunteer orientation where they received instructions on how to conduct the count and on important safety guidelines.

Unsheltered Homeless Count

Street-Based Count

The street-based count took place on January 26, 2016, between 5:30 a.m. and 9:30 a.m. A total of 533 volunteers were divided into groups of three and deployed across Riverside County to pre-identified locations where homeless people were known to live and/or congregate. Volunteers served as team leaders, lookouts, or counters and met at one of the deployment centers across the county to receive their team assignments, surveys, supplies, and maps.

In December 2015, Riverside County Information Technology (RCIT) developed a GIS mapping tool (Geoform) to track information on locations where homeless people were known to live and/or congregate and an assessment of safety of each location. This link was sent to City Leaders, Law Enforcement agencies, Code Enforcement agencies, PIT Count Volunteers, and other community organizations. RCIT generated maps for volunteers to take with them into the field. These maps covered smaller grids within each city (2.5 mile by 1.5 mile grid). While some sites used their own maps, added their own data points, or used their own color schemes, RCIT-generated maps were provided to any city or area that requested a map. Locations were categorized based on the safety assessment included in the mapping tool: unsafe (yellow), safe (green), and safety unknown (blue).

Service-Based Count

The service-based count took place on January 26, 2016, between 7:00 a.m. and 2:00 p.m. Several weeks prior to the count, DPSS staff compiled a list of agencies that provide services to homeless people throughout Riverside County. The list was compiled using several resources, including:

- a list of service agencies that the DPSS Homeless Programs Unit had on hand;
- an internet search; and
- Riverside County's Continuum of Care.

Though efforts were taken to compile a comprehensive list, this list is by no means exhaustive. Once the final list was completed, contact was attempted with each organization. The goal of contacting each organization was to verify the agency name, contact information, operational hours, and to assess each agency's interest level and how many estimated volunteers would be needed. All agencies that operated between the hours of 7:00 a.m. and 2:00 p.m. on Tuesdays were contacted or attempts were made. The remaining agencies were classified into four categories: information unconfirmed; willing to administer surveys with agency staff; willing to have volunteers administer surveys at facility; and not interested in participating.

Behavioral Health Homeless Outreach Count

Riverside University Health System – Behavioral Health Homeless Outreach (DBH) teams agreed to canvass non-city (unincorporated) areas in Riverside County. DBH performed their main unsheltered counts of non-city areas on the day of the Count, and also performed a follow-up sweep during the seven-day period after, as allowed by the HUD methodology.

"A survey of people at various social service locations or other public or private locations to identify people who were unsheltered, but not counted, on the night of the count--either because CoC's did not use a night of the count approach or because unsheltered people were missed on the night of the count. Service-based counts may only be conducted within the seven-day period after the designated count night."⁵

DBH used 34 staff volunteers teamed with six homeless volunteers to complete the count. The coverage they provided to the non-city areas included both (a) reconnaissance work to assess if particular areas had homeless people and (b) surveying the individuals they found during their reconnaissance at a later date. More specifically, six outreach teams canvassed the areas to assess the presence of homeless people. This reconnaissance work began the week of January 4-8th, 2016 and continued every day leading up to the Count. If absolutely no indication of homeless people was found in a particular area, DBH returned for one last round of reconnaissance two days prior to the Count. If DBH found, or knew of, suspected homeless individuals in a particular area, they returned on the day of the Count (or the seven day window afterward) to administer the survey. On the day of the Count, 12 teams surveyed the locations with known homeless, and four smaller outreach teams surveyed the remaining locations over the next seven days.

Sheltered Homeless Count

The shelter-based count involved counting homeless individuals who stayed in shelters on the night of January 25, 2016. The sheltered count was conducted in accordance with HUD's counting standards and methodology guidance. The primary data source for the sheltered count is the Homeless Management and Information System (HMIS) database. The sheltered count included counting homeless individuals and families who stayed in emergency shelters and transitional housing on the night of January 25, 2016.

⁵ 2014 Point-In-Time Methodology Guide, p. 19

In preparation for the count, a PowerPoint presentation was sent to HMIS participating agencies to provide an overview of the 2016 PIT and the requirements for data collection. In addition, an email was sent to each agency with instructions to ensure that all required data elements are complete, accurate, and that “Project Entry” and “Project Exit Dates” have been entered for participants who entered and exited on or before the night of the count. A copy of the PIT report taken from HMIS was included for each agency’s verification.

For non-HMIS participating agencies and domestic violence providers, a survey form was provided to fill in demographic and household data. This information will be used to complete the population reporting requirement. To ensure data quality, accuracy and completeness, a staff was dedicated to focus on reviewing data quality as well as coordinate with HMIS participating agencies to complete any missing information.

Unsheltered Homeless Count Findings

There were a total of 1,351 individuals counted during the 2016 unsheltered homeless count. Table 4 displays the overall data by city or unincorporated area. When presenting any data below, please note that there is a distinction between observational data (based on volunteer perception) and interview data (based on respondent's self-identification), as discussed earlier in the report.

The total column for 2016 represents a summation of the interview and observational data. Both the total count for each city and the respective percentage of the total number of unsheltered homeless people in Riverside County are provided. Table 4 also compares the 2016 city counts to the 2015 city counts. In the final column on the right of the table is the percent change between 2015 and 2016. It should be noted that this comparison does *not* take into account the total sample sizes for each year. The comparative data is presented this way in order to show the raw change in unsheltered homeless counts for each city or unincorporated area from 2015 to 2016.

Table 4. Unsheltered Homeless Count by City and Type of Data

City or Unincorporated Area	General PIT Count		Total Unsheltered				Percent Change
	Interview	Observational	2015		2016

Grand Total	1042	309	1587	-	1351	-	-15%

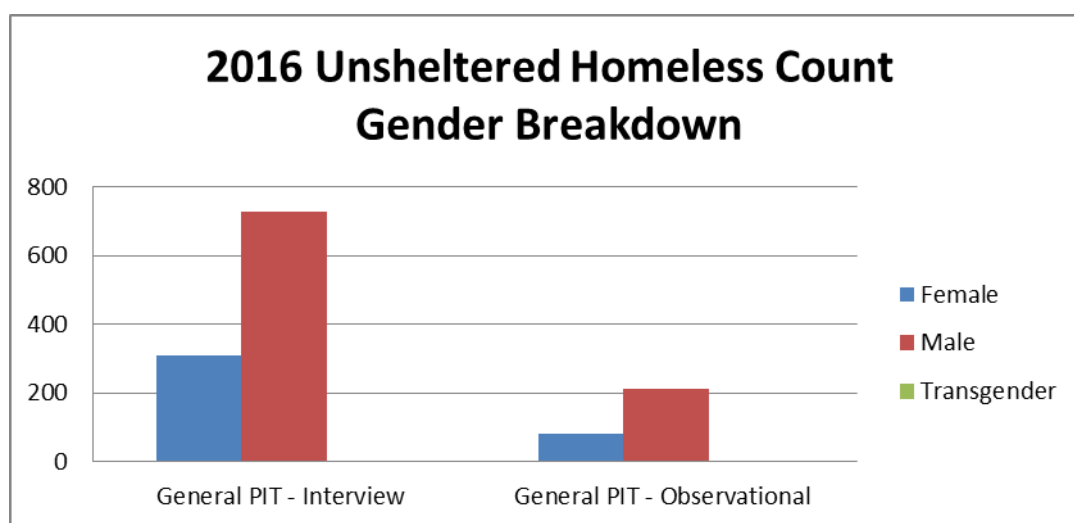

Of the 1,351 unsheltered homeless people, a majority (70%) of these individuals were men (n = 940). Only one of the unsheltered homeless population identified as transgender was counted. See Table 5 below for full details. Table 5 also compares the 2015 to the 2016 gender subpopulation counts. In the final column on the right of the table is the percent change between 2015 and 2016. It should be noted that this comparison does not take into account the total sample sizes for each year. The comparative data is presented this way in order to show the raw change in unsheltered homeless gender counts from 2015 to 2016.

Table 5. 2015-2016 Unsheltered Homeless Count Comparison – Breakdown of Gender

Gender	2016 General PIT Count		Total Unsheltered Comparison				Percent Change
	Interview	Observational	2015		2016		
			Count	Percent	Count	Percent	
Female	308	81	398	25%	389	29%	-2%
Male	728	212	1077	68%	940	70%	-13%
Transgender	1	0	8	1%	1	0%	-88%
Don't Know or Refused	0	13	70	4%	13	1%	-81%
Blank	5	3	34	2%	8	1%	-76%
Total	1042	309	1587	100%	1351	100%	-15%

*Note: Interview data is based on respondent's self-identification while observational data is based on volunteer perception.

Figure 1. 2016 Unsheltered Homeless Count – Breakdown of Gender

A majority of the unsheltered homeless population either identified or were observed as White (n = 822) (See Table 6 below). Approximately one fourth of the population either identified as or were observed as Hispanic or Latino. Ethnicity was assessed in a separate question than race as HUD considers Hispanic to be an ethnicity, not a race. See Table 6 for full details regarding race and ethnicity. Table 6 also compares the 2015 to the 2016 race subpopulation counts. In the final column on the right of the table is the percent change between 2015 and 2016. It should be noted that this comparison does not take into account the total sample sizes for each year. The comparative data is presented this way in order to show the raw change in unsheltered homeless race counts from 2015 to 2016.

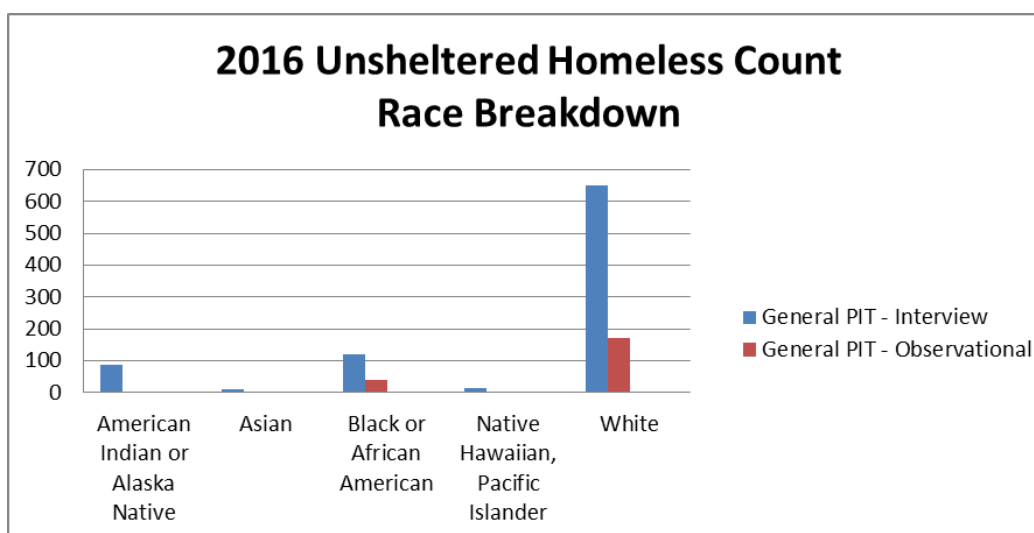

Table 6. 2015-2016 Unsheltered Homeless Count Comparison – Breakdown of Race and Ethnicity

Race	2016 General PIT Count		Total Unsheltered Comparison				Percent Change
	Interview	Observational	2015		2016		
			Count	Percent	Count	Percent	
American Indian or Alaska Native	85	2	45	3%	87	6%	93%
Asian	10	0	14	1%	10	1%	-29%
Black or African American	121	39	164	10%	160	12%	-2%
Native Hawaiian, Pacific Islander	12	0	6	0%	12	1%	100%
White	650	172	943	59%	822	61%	-13%
Multiple Races	27	28	30	2%	55	4%	83%
Don't Know or Refused	169	89	210	13%	258	19%	23%
Blank	31	8	175	11%	39	3%	-78%
Hispanic (ethnicity)	312	60	388	24%	372	28%	-4%

**Note:* Interview data is based on respondent's self-identification while observational data is based on volunteer perception.

Ethnicity was assessed in a separate question than race as HUD considers Hispanic to be an ethnicity, not a race.

Figure 2. 2016 Unsheltered Homeless Count – Breakdown of Race

The majority of the 2016 unsheltered homeless population was between the ages of 50-61 (n = 396) and 40-49 (n = 305). See Table 7 for full details regarding age. Table 7 also compares the 2015 to the 2016 age subpopulation counts. In the final column on the right of the table is the percent change between 2015 and 2016. It should be noted that this comparison does not take into account the total sample sizes for each year. The comparative data is presented this way in order to show the raw change in unsheltered homeless age counts from 2015 to 2016.

Table 7. 2015-2016 Unsheltered Homeless Count Comparison – Breakdown of Age

Gender	2016 General PIT Count		Total Unsheltered Comparison				Percent Change
	Interview	Observational	2015		2016		
			Count	Percent	Count	Percent	
0 – 5	1	0	-	-	1	0%	-
17 or under	13	0	12	1%	13	1%	8%
18-24	58	24	116	7%	82	6%	-29%
25-29	64	37	112	7%	101	7%	-10%
30-39	180	76	256	16%	256	19%	0%
40-49	241	64	330	21%	305	23%	-8%
50-61	341	55	446	28%	396	29%	-11%
62-69	75	19	107	7%	94	7%	-12%
70-79	17	5	20	1%	22	2%	10%
80+	3	1	1	0%	4	0%	300%
Blank	50	28	187	12%	78	6%	-58%
Total	1042	309	1587	100%	1351	100%	-15%

**Note:* Interview data is based on respondent's self-identification while observational data is based on volunteer perception. 0-5 age group data was not collected on 2015 PIT Count Survey

Figure 3. 2016 Unsheltered Homeless Count – Breakdown of Age

Most of the unsheltered homeless individuals were not veterans. See Table 8 for a total count of veterans and chronically homeless veterans that were counted.

Table 8. 2016 Unsheltered Homeless Count – Veterans

Population	#
Unsheltered Homeless Veterans	100
Unsheltered Chronically Homeless Veterans	36

Among the unsheltered homeless population, 29% were considered chronically homeless (n = 299); 21% were recently released from jail or prison (n = 223); and 25% were victims of domestic violence (n = 265). See Table 9 below for full details on these unsheltered subpopulations. Table 9 also compares the 2015 to the 2016 subpopulation counts. In the final column on the right of the table is the percent change between 2015 and 2016. It should be noted that this comparison does not take into account the total sample sizes for each year. The comparative data is presented this way in order to show the raw change in unsheltered homeless subpopulation counts from 2015 to 2016.

Table 9. 2016 Unsheltered Homeless Count Comparison – Breakdown of Subpopulations

Subpopulation	Total Unsheltered Comparison				Percent Change
	2015		2016		
	Count	Percent	Count	Percent	
Chronically Homeless	401	37%	299	29%	-25%
Families with Children	14	1%	8	1%	-43%
Recently Released Incarceration	225	21%	223	21%	-1%
Recently Released Medical or Rehab	-	-	135	13%	-
Veterans	102	9%	100	10%	-2%
Youth 24 or younger	128	12%	95	9%	-26%
Alcohol Use	474	44%	273	26%	-42%
Drug Use	348	32%	341	33%	-2%
PTSD	179	17%	200	19%	12%
Mental Health Conditions	322	30%	275	26%	-15%
Physical Disability	300	28%	326	31%	9%
Developmental Disability	155	14%	128	12%	-17%
Brain Injury	159	15%	201	19%	26%
Victim of Domestic Violence	243	23%	265	25%	9%
AIDS or HIV	22	2%	11	1%	-50%

**Note:* This information was only obtained from the interview surveys (not observational surveys).

Chronically homeless was defined according to HUD's definition if the person had been living in emergency shelter and/or on the streets (a) for the past year or more or (b) four or more times during the last three years and who may have a disability (HUD HEARTH Act Interim Rule, pgs. 53-54).

Recently released was defined as someone who was released from jail or prison within the past 12 months.

An individual could potentially be categorized into multiple or all subpopulations.

Recently released Medical or Rehab data was not collected on the 2015 PIT Count Survey.

Among the unsheltered homeless population, 26% reported using alcohol (n = 273), 33% reported using drugs (n = 341), 19% reported suffering from Post Traumatic Stress Disorder (PTSD) (n = 200), 26% reported having a mental health condition (n = 275), 31% reported having a physical disability (n = 326), 12% reported having a developmental disability (n = 128), and 19% reported suffering from a brain injury (n = 201). Among those individuals who reported experiencing these situations, almost half of them indicated that PTSD (53%), mental health conditions (52%), physical disabilities (58%), and developmental disabilities (46%) prevented them from obtaining stable housing or a steady job. It is important to note that an individual could potentially be categorized into multiple or all subpopulations. Table 10 also compares the 2015 to the 2016 subpopulation counts. In the final column on the right of the table is the percent change between 2015 and 2016. It should be noted that

this comparison does not take into account the total sample sizes for each year. The comparative data is presented this way in order to show the raw change in unsheltered homeless subpopulation counts from 2015 to 2016. See Table 10 below.

Table 10. 2016 Unsheltered Homeless Count Comparison – Breakdown of Subpopulations Preventing Housing

Subpopulation	Total Unsheltered									
	Number of respondents who stated they have experienced...					Number of respondents who stated it prevents them from obtaining housing or work				
	2015		2016		Percent Change	2015		2016		Percent Change
	Count	Percent [†]	Count	Percent [†]		Count	Percent [†]	Count	Percent [†]	
Alcohol Use	474	44%	273	25%	-74%	63	6%	61	6%	-3%
Drug Use	348	32%	341	32%	-2%	69	6%	90	9%	30%
PTSD	179	17%	200	19%	11%	79	7%	106	10%	34%
Mental Health Conditions	322	30%	275	26%	-17%	144	13%	144	14%	0%
Physical Disability	300	28%	326	30%	8%	136	13%	190	18%	40%
Developmental Disability	155	14%	128	12%	-21%	65	6%	59	6%	-9%
Brain Injury	159	15%	201	19%	21%	58	5%	82	8%	41%

*Note: This information was only obtained from the interview surveys (not observational surveys).

† This percent (rounded) reflects the portion of people who experienced this criteria and who indicated it prevented them from obtaining housing and/or work. For example, 273 people reported using alcohol. Of those 273 people, 61 reported it prevented them from obtaining housing or work (22%). An individual could potentially be categorized into multiple or all subpopulations.

Table 11 below displays subpopulation data by city versus unincorporated area. This table provides a highlight of subpopulation information. A count for each city is provided, as well as its corresponding percentage of the total unsheltered sample that had subpopulation data available (n = 1,042). It is important to note that subpopulation information was not collected on the observational tool. Additional subpopulation information for the overall total amount of unsheltered homeless can be found in Table 9.

Table 11. Unsheltered Homeless Count – Subpopulation Data by City versus Unincorporated Area

Sheltered Homeless Count Findings

A total of 814 homeless individuals were counted during the shelter count. These individuals stayed in emergency shelters (including domestic violence shelters and hotel/motel vouchers) and transitional housing. This represents an 8% *decrease* from the 2015 sheltered count (n = 883). See Table 12 below.

Table 12. Sheltered Homeless Count – Subpopulation Data

Subpopulation	2016	
	Count	Percent
Chronically Homeless Individuals	70	9%
HIV Positive/AIDS	6	<1%
Mental Health Problems	209	26%
Substance Users	166	20%
Minor Youth (under 18)	166	20%
Accompanied Minor Youth (under 18)	150	18%
Unaccompanied Minor Youth (under 18)	16	2%
Youth (18-24)	72	9%
Veterans	111	14%
Victims of Domestic Violence	108	13%

Conclusions

There are several possible reasons for the overall decrease in the unsheltered homeless count from 2015 to 2016. Over the past several years, HUD continues to see a decrease in nationwide homelessness (especially in homeless veterans and chronically homeless)⁶. Thus, Riverside County's overall decline in 2016 is in line with declines on a national level. The PIT Planning team and our Continuum of Care community partners have identified the following factors that may have contributed to the decrease in Riverside County's homeless count since 2013.

1. In March 2014 the Obama administration and HUD set a national priority to end homelessness among veterans by the end of 2015 and end chronic homelessness by the end of 2017. A national campaign and infusion of funding and other resources to counties and cities has helped reduce the number of homeless veterans in the United States by 24%. In 2013, there were 57,849 homeless veterans throughout the country. This infusion of funding and services in Riverside County included:
 - a. An additional \$3 million in "surge" funding to nonprofit agencies to provide supportive services to veterans and their families the county received in 2014 from the U.S. Department of Veterans' Affairs (VA).
 - b. The funding helps with services to identify homeless and very low-income veterans to help them move from temporary or transitional housing to permanent housing. The funding offers outreach, case management, connection to VA benefits and programs, and financial assistance for housing. In addition, the county received increased funding for the Veterans' Affairs Supportive Housing (HUD-VASH) program that provides rental assistance for homeless Veterans with case management and clinical services provided by the Department of Veterans' Affairs (VA) and Supportive Services for Veteran Families (SSVF) program that provides a range of supportive services to eligible Veteran families that are designed to promote housing stability.
2. The County of Riverside Continuum of Care (CoC), a network of homeless service providers, has made an impact in helping to eliminate homelessness. Specifically, the CoC implemented programs that have shown promise in placing chronically homeless people into permanent housing first and then providing needed services that address barriers that can keep a person in homelessness. The CoC also strengthened coordination among the network of providers and increased funding focused on helping individuals and families who are homeless become "rapidly re-housed" through temporary, one-time assistance.
3. New funding resources and a shifting of existing HUD funding has resulted in a 79% increase in the number of new permanent housing beds for homeless individuals and families since 2013⁷. This includes the funding and resources for veterans listed above and an additional 92 permanent supportive housing beds for chronically homeless individuals were added through the CoC's permanent housing bonus funds awarded in 2014 to be used in 2015.

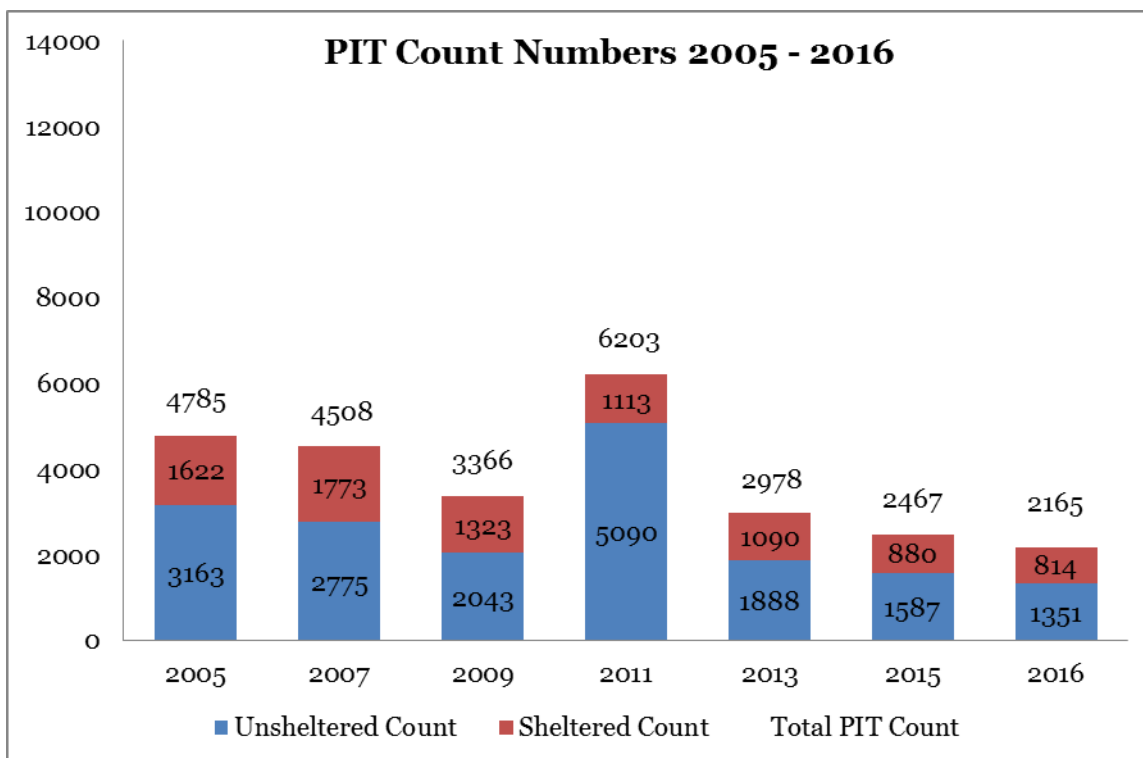

In addition to the above rationale, Riverside County's PIT Count numbers have been steadily decreasing since the PIT Count was first implemented in 2005. One exception in the steady decline of homeless individuals occurred during the 2011 PIT Count. In this particular year a multiplier methodology was used whereby survey respondents were asked to estimate how many people usually stay at that location at night. The only year that

⁶ http://portal.hud.gov/hudportal/HUD?src=/press/press_releases_media_advisories/2014/HUDNo_14-135

⁷ The 2013 Housing Inventory Chart (HIC) reported 862 permanent beds; in 2015, there were 1,547 permanent beds reported in the HIC. This included; HUD Permanent Supportive Housing, Rapid Rehousing, Veterans' Affairs Supportive Services for Veterans and VA Supportive Housing (HUD-VASH).

utilized this multiplier methodology was 2011, which may explain the sudden increase in homeless people in this particular year. See Figure 4 below.

Figure 4. 2016 Total Homeless Count Comparison – Year-Over-Year

Challenges, Limitations, & Recommendations

Street-Based Count

The DPSS PIT Count Planning Team and the various City PIT Leaders continue to increase public awareness, and refine their processes for conducting a successful PIT Count within Riverside County. Several city leaders of the PIT Count have reported that because of the increased publicity, many of the familiar homeless individuals seemed to relocate before the morning of the count. To address this concern, DBH Homeless Outreach teams performed their main unsheltered counts of non-city areas on the day of the Count, but also performed a follow-up count of various cities during the seven-day period after, as allowed by the HUD methodology.

During the 2016 Unsheltered PIT Count, the presence of law enforcement noticeably increased from the participation level during the 2015 PIT Count. A special thanks to the Riverside County Sheriff's Department and the various local police departments that collaborated in the planning and implementation of the PIT Count. Continued collaboration with the various law enforcement agencies in the 2017 PIT count and an even greater participation level will continue to improve future PIT Counts.

Service-Based Count

Several challenges were encountered with the service-based count. First, the list of service agencies was not comprehensive because this task was initiated in late December and thus not enough time was permitted to create an exhaustive list. Significant time and staff resources are needed to create such a comprehensive list. The next PIT Count Planning Team should consider eliciting assistance from DPSS Continuum of Care community partners in researching and creating a more comprehensive list of homeless service agencies in Riverside County. Additionally, a more thorough outreach to agencies well in advance of the PIT Count should be conducted.

Youth Count

The PIT Count Planning Team lacked adequate resources to conduct a separate Youth Count in 2016. Unaccompanied homeless youth are often difficult to find because they tend to: (a) congregate at different times and places than older adults, (b) refuse (or are unaware of) social service programs and agencies, and (c) do not want to be found as they may be fleeing abuse or the foster care system. In 2015, the Youth Count magnet events did not attract as many unaccompanied homeless youth as was projected; therefore, this strategy was not used for the 2016 Count.

Although a separate Youth Count was not conducted in 2016, the PIT Count Planning Team met with youth service agencies to identify locations of homeless youth. In 2017, HUD will require CoCs to conduct a separate Youth PIT Count. The PIT Count Planning Team recommends early and ongoing collaboration and planning with youth services agencies to facilitate the planning and implementation of a separate Youth PIT Count.

Shelter Count

The shelter count primarily consisted of extracting data from the HMIS database. However, not all shelters participate in HMIS (such as, providers for victims of domestic violence and hotel/motel vouchers). Some non-HMIS participating agencies do not use a database system to track their data. Instead, they rely on daily written logs and sign-in-sheets to provide the count demographics and household information. Additionally, there have been challenges in collecting the required information from the several non-HMIS agencies in a timely manner. The PIT Count Planning Team recommends that non-HMIS participating agencies continue to be encouraged to utilize the HMIS (except for the Domestic Violence agencies) database in order to collect the required information in a timely manner.

Appendix A: Survey Instruments

2016 PIT Count Interview Survey – Page 1

RIVERSIDE COUNTY CoC

Unsheltered Street Count Form for Night of Count – Interview Tool

JAN. 26, 2016

Location of Interview: _____ City _____ Zip Code _____
(street intersection/specific location) *(Zip Code is required)*

Interviewer Name _____ Time: _____ AM/PM

USE ONE FORM PER INDIVIDUAL OR FAMILY UNIT.

1. Where did you and your family unit sleep last night?

Mark 1 to 13

- ① Street or sidewalk ⑤ Vehicle (car, van, RV, truck)
 ② Abandoned building ⑥ Bus, train station, airport
 ③ Under bridge/overpass ⑦ Woods or outdoor encampment
 ④ Park (Specify) _____ ⑧ Other (Specify) _____

- ⑨ Emergency shelter ⑫ House or apartment
 ⑩ Transitional housing ⑬ Jail, hospital, treatment program
 ⑪ Motel/hotel

IF ANY OF THESE OPTIONS ARE SELECTED, STOP THE SURVEY

2. Did another volunteer already ask you these same questions about where you stayed last night? ☐ YES ☐ NO

STOP ***IF YES, STOP THE SURVEY*** STOP

3. Including yourself, how many adults & children are there in your family unit, who slept in the same location with you last night?

Adults (25+): _____ Adults (18-24): _____ Children (17 or under): _____

4. A) What are your initials [and other people in your family, from oldest to youngest]?

B) What is your relationship with person 2 through 5?

Mark 1 to 5

- ① Child ② Spouse ③ Other Family
 ④ Non-Married Partner ⑤ Other/Non-Family

Person #	4A. First/Last Initials	4B. What is your (Person 1's) relationship to Persons 2 – 5
1		Self
2		① ② ③ ④ ⑤
3		① ② ③ ④ ⑤
4		① ② ③ ④ ⑤
5		① ② ③ ④ ⑤

5. What is the month and year of your birthday and other family members?

	Month	Year
Person 1:		
Person 2:		
Person 3:		
Person 4:		
Person 5:		

6. What CITY and STATE were you born in?

	CITY	STATE
Person 1:		
Person 2:		
Person 3:		
Person 4:		
Person 5:		

(WRITE COUNTRY IF NOT U.S.)

Read: The next few questions may seem fairly obvious, but we do not want to assume anything. We want to know how you self-identify, so I will read each question and all response options.

7. Are you male (M), female (F), or transgender (TG)?

Person 1: ☐ M ☐ F ☐ TGPerson 2: ☐ M ☐ F ☐ TGPerson 3: ☐ M ☐ F ☐ TGPerson 4: ☐ M ☐ F ☐ TGPerson 5: ☐ M ☐ F ☐ TG

8. Are you Hispanic or Latino?

Person 1: ☐ YES ☐ NOPerson 2: ☐ YES ☐ NOPerson 3: ☐ YES ☐ NOPerson 4: ☐ YES ☐ NOPerson 5: ☐ YES ☐ NO

9. What is your race? You can select one or more races.
